

Protecting Your People

Your people are the most important asset you have. While nothing can replace a qualified, trained operator to safely operate the forklift, by working together, we can help ensure that everyone leaves the warehouse the same way that they showed up...day in and day out.

Productivity

Jungheinrich® warehouse products are designed with numerous standard features and available options to supplement your existing safe work practices.

Highly Intuitive Controls

Whether it's the jetPILOT® steering of the tow tractor lineup or the multifunction joystick of the reach trucks, Jungheinrich has designed its products to be easily operated with efficiency and precision.

Programmable Performance Modes

Allow the user to select from various levels of truck performance based on operational need and operator skill/experience levels.

speedCONTROL

Customizes maximum travel speeds to maintain the productivity levels you need, while ensuring travel speeds are aligned with the operator skill level.

curveCONTROL

Gradually slows the speed of the truck when cornering as sensors in the steer axle monitor steering angles, to help find the right balance between stability and productivity.

liftCONTROL

Provides the precision required for more optimal stacking and retrieval speeds, by calculating the reduced tilt speed of the mast at defined lift heights.

driveCONTROL

Depending on the real-time height of the forks, it limits the trucks' travel speed to precisely calculated levels, helping to ensure acceptable speeds during pick and place maneuvers.

Optional Fork and Carriage Mounted Cameras

Available on most Jungheinrich models, operators can confidently move product by providing a view of the load from a carriage or fork mounted camera.

Enhanced Load Visibility

Designed for excellent visibility to the load whether traveling with it on the forks or when visibility is required through the OHG as the load is being lifted, lowered or loaded into or out of racking.

Ergonomics & Safety

Operator Presence Systems

This feature helps to ensure that the operator is in the intended operating position before travel or hydraulic functions can be activated, promoting and requiring a safe operating technique.

Floor Edge Sensor

This available option reminds the operator to properly position their foot inside the operator compartment during operation in stand-up units.

Intuitive Display

Provides a direct line of constant communication from your truck to the operator, giving operators and technicians real-time updates about the status and operation of the truck.

Suspended Operator Platforms

The suspended operator platforms, along with vibration absorbing cushioned matting, are designed to reduce stress on the body of the operator through long, productive shifts.

Operator Compartment Padding

Especially in stand-up trucks, high levels of coverage in comfort padding allow for the operator to be surrounded by cushion when operating the truck.

Available Seat Options

Extremely comfortable seats come standard, but there are also a variety of available options to meet your needs that include different materials, range of motion and levels of suspension.

Rear Door Option

On stand-up units with an open entry to the operator compartment, this provides a physical barrier that can help mitigate the potential of objects intruding into the operator compartment.
