

Protecting Your Machines

If our products are designed with features to reduce the risks to your people, products and warehouse, then why wouldn't we want to protect the machines too?

Jungheinrich® offers numerous assistance systems and services that help increase uptime and productivity so your operations can continue to run smoothly while delivering a high level of throughput that your customers expect.

Productivity

Jungheinrich warehouse products offers standard and optional features to aid in the smooth operation of the machines.

Automated Guided Vehicles (AGVs)

Reduce the possibility for error while optimizing productivity with more accurate operation through semi-automation or full-automation solutions.

Highly Intuitive Controls

Whether it's the jetPILOT® steering of the tow tractor lineup or the multifunction joystick of the reach trucks, Jungheinrich has designed its products to be easily operated with efficiency and precision.

Programmable Performance Modes

Allow the user to select from various levels of truck performance based on operational need and operator skill/experience levels.

speedCONTROL

Customizes maximum travel speeds to maintain the productivity levels you need, while ensuring travel speeds are aligned with the operator skill level.

curveCONTROL

Gradually slows the speed of the truck when cornering as sensors in the steer axle monitor steering angles, to help find the right balance between stability and productivity.

liftCONTROL

Provides the precision required for more optimal stacking and retrieval speeds, by calculating the reduced tilt speed of the mast at defined lift heights.

driveCONTROL

Depending on the real-time height of the forks, it limits the trucks' travel speed to precisely calculated levels, helping to ensure acceptable speeds during pick and place maneuvers.

Optional Fork and Carriage Mounted Cameras

Available on most Jungheinrich models, operators can confidently move product by providing a view of the load from a carriage or fork mounted camera.

Enhanced Load Visibility

Designed for excellent visibility to the load whether traveling with it on the forks or when visibility is required through the OHG as the load is being lifted, lowered or loaded into or out of racking.

Special Application Packages

Tropical packages, cold storage options, operator cabs and other special application options make sure that your trucks are fully equipped to meet whatever demands your application requires.

Serviceability

JUDIT Software Tool

Technicians are equipped with a proprietary software tool to quickly and conveniently diagnose issues with the truck as it communicates with their laptop.

Easy Access to Key Components

Allows easy access for technicians. Paired with the organized design, most compartment covers can be easily removed with minimal tools – meaning less time and difficulty during servicing.

Ingress Protection

Sealed components (connectors, motors, etc.) provide high levels of Ingress Protection from moisture and dust.
